

Pfizer-BioNTech Comirnaty COVID-19 vaccine

All COVID-19 vaccines authorized in Canada are proven safe, effective and of high quality.

Name: Pfizer-BioNTech Comirnaty® COVID-19 vaccine

Manufacturer: BioNTech Manufacturing GmbH

Type: mRNA

Status: Approved by Health Canada

Approved for: Age 5 and older

How it's given: Injection in muscle (usually the upper arm)

Number of doses: 2 doses

Dosage

The dosing schedule approved by Health Canada is to give 2 doses (30 mcg each for ages 12 and older or 10 mcg each for ages 5 to 11) 21 days apart, based on evidence from clinical trials.

A booster dose of the Pfizer-BioNTech Comirnaty® COVID-19 vaccine may be administered in individuals 18 years of age and older at least six months after completing their primary vaccine series.

Mixed dose schedules

A different vaccine may be offered for your second dose. For example, you may have received Pfizer-BioNTech Comirnaty® as your first dose and be offered Moderna Spikevax® as your second. This is known as a mixed vaccine series.

Common vaccine side effects may include:

Symptoms at the injection site, such as:	More general symptoms, such as:	Rare vaccine side effects
Redness, soreness and swelling	Chills, fatigue, joint pain, headache, mild fever, muscle aches	Myocarditis and pericarditis Bell's palsy (facial paralysis)
